

# FISHING INFORMATION

Welcome!

Övre Gla Fish Conservation Area Association comprises Övre Gla and the surrounding lakes and ponds, which in total consist of 7 lakes and 32 ponds with an abundance of fish. The area is principally located within the Gla nature reserve (see: [www.glaskogen.se](http://www.glaskogen.se)) between Årjäng and Arvika in the west part of Värmland.

The Övre Gla Fish Conservation Area Association was founded in 1944, and from its inception has engaged in activities that promote fishing such as fish stocking, habitat management conservation work, the elimination of obstacles to migration, and the outsourcing of 'risvasar' (a pile of brushwood/spruce twigs used to offer protection and a good growing environment for small fish).

The liming of the area's lakes and ponds started in the 1970s, and this practice has continued ever since. In the lakes here, you will find perch, pike, trout, burbot, eel, whitefish, salmon, roach, bleak, smelt, minnow, and sticklebacks. Perch is the most common type of fish found in the area's lakes.

The objective of the Association is to continually develop sustainable fishing. Income from fishing license sales are reinvested into habitat preservation and fishing promotion measures.

## Fishing Regulations

Salmon, trout, char, whitefish, eel, burbot and northern pike, maximum 3 fish, sized 30 cm or larger per person and day. Fishing in flowing water is prohibited. Your fishing license permits you to fish with a fly rod, spinning rod, and a jig and fishing rod. When fishing from a boat, a maximum of 3 baits per boat are allowed at the same time. Children and youth under the age of 16 are allowed to fish without a license. Fishing with static gear such as nets, traps, creels, long lines, etc, is prohibited. The release of uninjured fish is recommended.
